

# Jiamin Li

Pronouns: she/her/hers ◊ Email: jiaminli.icy@gmail.com ◊ Tel: +852 54847038  
Ph.D. Candidate (4<sup>th</sup> year) ◊ Computer Science ◊ City University of Hong Kong

## RESEARCH INTERESTS

---

I am primarily interested in Machine Learning Systems (MLSys) with a specific focus on the following topics:

- Distributed training & inference: Accelerating large-scale distributed DNN models
- Adaptive and sparse computation: Exploring new computing paradigms to effectively scale DNN models
- Resource scheduling in GPU clusters: Designing efficient scheduling algorithms for DNN tasks
- Simulation: Building accurate performance simulator of DNN training workloads

At present, I am actively engaged in constructing efficient systems tailored for large language models.

## EDUCATION

---

**The University of Texas at Austin, Austin, TX, United States** Apr. 2023 – Present

Visiting Researcher at UTNS Group, Department of Computer Science.

Supervisor: Prof. Aditya Akella

Project: Efficient Systems for Large Language Models

**City University of Hong Kong, Kowloon, Hong Kong** Sep. 2019 – Present

Ph.D. Candidate, Department of Computer Science.

Supervisors: Prof. Hong Xu (The Chinese University of Hong Kong), Prof. Cong Wang (CityU)

Dissertation Title: TBD

**City University of Hong Kong, Kowloon, Hong Kong** Aug. 2015 – Jul. 2019

B.S., Department of Computer Science (First Class Honours).

Advisor: Prof. Shiqi Wang

Dissertation Title: “Mobile Face Anti-spoofing with Deep Learning”

**University of Missouri, Columbia, MO, United States** Jul. 2017 – Aug. 2017

Big Data Analysis Summer Program, Department of Computer Science.

## WORKING EXPERIENCES

---

**Research Intern, MLSys - AI Lab, ByteDance** May. 2019 – May. 2021

Supervisor: Dr. Yibo Zhu

We build a scheduler for training and inference GPU clusters. The key idea is to exploit cluster-level elasticity by loaning idle inferences servers for training jobs and job-level elasticity by scaling training jobs to better utilize the dynamic resource pool.

**Part-time Research Assistant, City University of Hong Kong** May. 2018 – May. 2019

Supervisor: Prof. Hong Xu

During the backpropagation of distributed DNN training, some DNN model gradients exhibit negligible updates across multiple iterations. To address this, we propose an adaptive threshold approach that optimizes communication operations by selectively transmitting only the gradients with large updates, effectively reducing data size.

**Backend Developer Intern, Jardine Matheson & Co. Limited** May. 2017 – May. 2018

Design and develop web services to facilitate employee recruitment for the Group Human Resources department.

## PUBLICATIONS

---

## Preprints

- [P1] **Jiamin Li**, Cheng Luo, Ziyue Yang, Lei Qu, Peng Cheng, Cong Wang, Hong Xu, “Merak: An Analytical Performance Simulator for Large Scale Distributed Training”, under revision.

## Conference Proceedings

- [C3] **Jiamin Li**, Yimin Jiang, Yibo Zhu, Cong Wang, Hong Xu, “Accelerating Distributed MoE Training and Inference with Lina”, USENIX Annual Technical Conference (ATC), 2023. (Acceptance Rate = 18.4%) [Link]

## SELECTED RESEARCH PROJECTS

---

<b>Performance Simulator for Large-scale Distributed DNN Training</b>	Ongoing
---	---------

*Collaborate with Networking Research Group at Microsoft Research Asia*

We design a performance simulator to accurately predict the step time of large-scale distributed DNN training tasks. Merak introduces an analytical formulation to compute the all-reduce kernel running time. We also build an ML model to predict the running time slowdown caused by concurrent execution in wait-free backpropagation.

<b>Accelerating Distributed Training and Inference of Mixture-of-Experts models</b>	Completed
---	-----------

*Collaborate with MLSys team at ByteDance*

MoE models is prone to low efficiency, mainly due to the interleaved all-to-all communication during model computation. In Lina, we propose a communication scheme that prioritizes the all-to-all operations over other communication for MoE training. Besides, we introduce a resource scheduler that exploits expert selection pattern to amid the highly skewed expert popularity.

<b>Elastic Cluster Scheduler for DNN training jobs</b>	Completed
--	-----------

*Collaborate with MLSys team at ByteDance*

Organizations often build separate training and inference clusters for deep learning. This leads to low utilization in inference clusters and long queuing for jobs in training clusters. Lyra is designed and built to address these problems by cluster-level capacity loaning and job-level elastic scaling.

## AWARDS

---

ATC Student Travel Grant	USENIX ATC	2023
ML and Systems Rising Stars Workshop Program	ML Commons	2023
Research Activity Funds	City University of Hong Kong	2023
EuroSys Student Travel Grant	ACM EuroSys	2023
Full Postgraduate Studentship	City University of Hong Kong	2019 – 2023
Dean’s List (College of Engineering)	City University of Hong Kong	2015 – 2019

## TEACHING ASSISTANT

---

2022 Fall, 2019 Fall	CS2311, Computer Programming
2022 Spring, 2020 Spring	CS4296 & CS5296, Cloud Computing
2021 Fall	CS4394 & CS5294, Information Security and Management
2021 Spring	CS4293 & CS6290, Topics on Computer Security
2020 Fall	CS5222, Computer Networks and Internets

## PROFESSIONAL SERVICES

---

<b>Artifact Evaluation Committee</b>	ACM CoNEXT 2022, MLSys 2023, ACM EuroSys 2023, USENIX OSDI 2023, USENIX ATC 2023, ACM SOSP 2023
<b>Technical Program Committee Reviewer</b>	IEEE IJCNN 2023 IEEE/ACM Transactions on Networking

## TECHNICAL SKILLS

---

<b>Programming Languages</b>	C++, Python, Bash, Go, $\text{\LaTeX}$
<b>Operating Systems</b>	Linux/UNIX
<b>Machine Learning Systems</b>	PyTorch, MXNet, DeepSpeed, HuggingFace, NCCL, CUDA
